Keynote Presentation: Integration of current models of osteopathic approach based on diagnostic and integration strategies.

Mario González. FBEO Co-Principal.

As Osteopathy progresses in the direction of EBM, its bases and principles evolve both in form and nomenclature. However, it may be difficult in some cases to transfer this evolution into the classroom and teachers usually tend to fall back on to obsolete models in their lectures.

We would like to make a presentation on the progressive passage from models of cranial, visceral and structural osteopathy to the current models of osteopathic approach applied to the teaching area, from strategies of exploration and clinical reasoning logically organized and presented in a didactic way.
